

## PEOPLE WITH BRAIN INJURIES

---

People who have suffered a traumatism, a stroke or any other cerebrovascular accident may have difficulties in different areas such as mobility, cognition, language and sensory perception.

Our **solutions** for people with brain injuries provide support and assistance for both **therapeutic work** and everyday activities. Every person has different needs, which makes **personalized solutions** essential.

BJLive! has cooperated with the main Spanish hospitals that work with brain injury patients, creating solutions that can be adapted to suit the needs of each of them.
